

Gulnar HMS

Hotel Management System

USER MANUAL v1.0

This manual covers every module of the Gulnar Hotel Management System — Bookings, Inventory, Ledgers, Check-ins, Vendors, Reports, and Admin Settings.

GenZ Softwares

0324-4870261 | 0321-4242180

01 About This System — How It Works

Business Concept

Gulnar HMS is built around a three-tier business model designed for hotel allotment management. Gulnar Taiba Hotel owns a fixed inventory of rooms. Three partner agents — KHALID TRVL, Zaid, and ARWA — purchase allocations from Gulnar and sell them on to their own customers.

Gulnar Hotel	Owens the rooms. Has a fixed nightly purchase cost per room.
Agents (Partners)	KHALID TRVL, Zaid, ARWA. Each agent buys rooms from Gulnar and sells to their customers at their own rate.
Customers	The end clients (ledger holders) under each agent. They are charged the sale price set by the agent.
Voucher	Every confirmed booking generates a numbered voucher, updates inventory, and posts to both ledgers automatically.

The Two-Layer Ledger Flow

Every booking you create automatically creates entries in **two** ledgers simultaneously:

Ledger	Who Owes Whom	What It Tracks
Agent Ledger (Ledger Overview)	Customer → Agent	The sale price charged to the customer. Agent records what the customer owes.
Gulnar Ledger	Agent → Gulnar Hotel	The purchase cost Gulnar charges the agent. Profit = Sale Price – Gulnar Cost.
Vendor Ledger	Gulnar → Vendor	Extra rooms bought from outside vendors when Gulnar's own stock runs short.

TIP: You never need to manually create ledger entries for bookings — the system does it automatically the moment you click 'Create Booking'. Payments are recorded separately in each ledger.

02

Logging In

Fig 2.1 — Login page

How to Log In

Open your browser and navigate to your hotel system URL. Enter your username and password, then click **Sign In**.

Admin credentials	Username: admin Password: admin123
Staff credentials	Username: staff-1 Password: provided by admin
Single session	Only one session per account is allowed. Logging in elsewhere will log out the previous session.

NOTE: Staff accounts cannot access the Settings/Admin panel. Contact your admin to reset your password.

04 Bookings

The screenshot displays the 'Bookings' page in the Hotel MS system. On the left is a dark sidebar with navigation links: Dashboard, Bookings (selected), Check-ins / Outs, Inventory, Customers, Ledger (with sub-links: Ledger Overview, Gulnar Ledger, Gulnar Reports, Vendor Ledger), and Reports (with sub-links: Occupancy Grid, Ledger Summary). The main content area has a header with 'KHALID TRVL', 'Admin', and 'Logout' buttons. Below this is a 'Bookings' section with an 'Export Excel' button and a '+ New Booking' button. A search filter bar contains fields for 'Search' (placeholder: 'Voucher, customer, guest...'), 'Agent' (dropdown: 'All Agents'), 'Status' (dropdown: 'All Status'), 'Check-In From' (date picker), and 'Check-In To' (date picker). Below the filters is a table of bookings with columns: VOUCHER, AGENT, CUSTOMER, GUEST NAME, ROOM, CHECK IN, CHECK OUT, NIGHTS, SALE (SAR), COST (SAR), PROFIT, ROOM NO(S), and STATUS. A single booking is visible with voucher 202601, agent Zaid, customer Shifa Fatima, guest Ali, room 'Single x1 + 3 Bedroom Suite x3', check-in 2026-08-20, check-out 2026-08-25, 20 nights, sale price 6000.00, cost 5000.00, profit 1000.00, and status 'CONFIRMED'. Action buttons for 'Haram View', 'Edit', and 'Cancel' are shown for this booking.

Fig 4.1 — Bookings list with search filters

Viewing & Searching Bookings

The Bookings page lists every reservation. Use the filters at the top to narrow results:

Search box	Type any voucher number, customer name, or guest name.
Agent filter	Show bookings belonging to a specific agent only.
Status filter	Filter by CONFIRMED, TENTATIVE, CANCELLED, or CHECKED-IN.
Date range	Filter by Check-In From / To dates.
Export Excel	Downloads all filtered bookings as an Excel spreadsheet.

Notes

Optional notes...

✓ Create Booking Cancel

be different).

- Sale price** = what the agent pays the hotel per room per night. This posts to the ledger.
- Purchase price** = hotel's cost (auto-filled from room type).

Fig 4.3 — New booking form (bottom half)

- Voucher Number:** Auto-generated (e.g. 202602). You can edit it if needed.
- Tentative toggle:** Switch ON to save as tentative — no ledger entries, no real voucher. Use for unconfirmed quotes.
- Agent:** Select the partner agent for this booking. The Customer dropdown will update automatically.
- Customer (Ledger):** The customer who owes the money. Their ledger will be charged.
- Guest Name:** The actual person(s) staying — can differ from the customer.
- Room Types:** Select one or more room types and the quantity for each. Click '+ Add Another Room Type' for mixed bookings.
- Check-In / Check-Out:** The system calculates nights automatically. Total Rooms and the Live Calculation panel update instantly.

- 8. Purchase Price/Night:** Auto-filled from the room type's cost. This is what Gulnar charges internally.
- 9. Sale Price/Night:** The price the agent charges the customer. This posts to the customer ledger.
- 10. Room Numbers:** Optional — fill in actual room numbers after check-in (e.g. 101, 102, 205).
- 11. Haram View:** Tick if the booking includes Haram-view rooms.
- 12. Notes:** Internal notes — not printed on the voucher.
- 13. Create Booking:** Saves the booking, assigns the voucher number, creates ledger entries, and updates inventory.

TIP: The **Live Calculation** panel on the right updates in real-time as you fill in dates and prices, showing Nights, Rooms, Total Nights, Purchase cost, Sale charged, and Profit.

WARNING: Once a booking is **CONFIRMED**, editing it will recalculate and re-post the ledger. Always double-check figures before saving.

05

Check-ins & Check-outs

Fig 5.1 — Daily arrivals and departures view

How to Use the Check-ins / Check-outs Page

This page shows every arrival and departure for a selected date, split into two panels: **Arrivals** (green) and **Departures** (red/brown).

Date selector	Choose any date. Click 'Today' to jump to today, or use '← Prev' / 'Next →' to browse day by day.
Filter box	Type a customer, guest, or agent name to narrow the list.
Excel / PDF export	Download the day's arrivals & departures as Excel or PDF for front-desk use.
Arrivals panel	Lists all guests checking in on the selected date.
Departures panel	Lists all guests checking out on the selected date.

NOTE: Check-in status is automatically determined by the booking's Check-In and Check-Out dates — you do not need to manually mark a guest as checked in.

06

Inventory

Fig 6.1 — Monthly inventory calendar grid

Fig 6.2 — Occupancy-by-date search view

Monthly Inventory Calendar

The Inventory page shows a full-month grid of room availability. Each column is a calendar day. The grid is split into two sections:

Quad Rooms (Standard)	Single pool — all Standard room types (Single, Double, Triple, Quad) share one inventory pool. The number shown is the Quad's total room count.
Suite Rooms (Premium)	Each Premium type (Junior Suite, 3 Bedroom Suite) has its own separate inventory pool.
TOTAL BOOKED (orange)	How many rooms are booked on that day.

TOTAL ROOMS (blue)	Total rooms available (base + vendor purchases).
TOTAL AVAILABLE (green)	Rooms still free = Total Rooms – Total Booked.
Today highlight	Orange border highlights the current date.
Color legend	Green = Available, Orange = Partially booked, Red = Fully booked.

Occupancy by Date (Search View)

Select a date and click **Search** to see a detailed list of every active booking on that date, showing the customer, agent, room types, room numbers, and nights. Export as Excel or PDF using the buttons top-right.

Fig 7.1 — Ledger overview showing outstanding balances per agent

What is the Ledger Overview?

The Ledger Overview shows how much each agent’s **customers** owe to that agent in total. A green SAR 0.00 means the agent’s customers are fully paid up. A red amount means money is outstanding from customers.

View Details button	Opens the full agent ledger — lists each customer’s balance, and lets you drill into individual transaction history.
Green balance	Fully settled — no outstanding amounts.
Red balance	Outstanding — customers have unpaid charges.

NOTE: This ledger tracks **Agent ↔ Customer** money. For **Agent ↔ Gulnar Hotel** money, see the Gulnar Ledger.

07B Gulnar Ledger — Hotel Profit & Agent Payments

Fig 7.2 — Gulnar Ledger: revenue, cost, and profit/loss

Understanding the Gulnar Ledger

This ledger shows the financial relationship between the hotel (Gulnar) and each agent. It answers: *How much have agents earned from bookings, what does Gulnar's fixed cost total, and what is the net profit or loss?*

Total Revenue (sold at)	Sum of all sale prices agents charged customers.
Total Cost (362 × nights)	Gulnar's internal cost: fixed rate × total room-nights.
Gulnar Net Profit/Loss	Revenue minus Cost. Red means a loss; blue means profit.
Agent Balances table	Shows how much each agent still owes Gulnar. CLEAR (green) = paid. OWES GULNAR (red) = payment pending.
View Detail	Drill into each agent's transaction history with Gulnar and record payments.

08 Vendor Ledger

Hotel MS

KHALID TRVL Admin Logout

Room suppliers — room purchases & payments

Total Vendor Purchase Cost
SAR 0.00

Vendors

VENDOR	PHONE	BALANCE OWED (SAR)
Att	—	SAR 0.00 Ledger
Fahad gulnar taiba	—	SAR 0.00 Ledger
Hamdan travel	—	SAR 0.00 Ledger
Haseeb memon	—	SAR 0.00 Ledger
JUNAIDI	—	SAR 0.00 Ledger
JUNAIDI ARWA	—	SAR 0.00 Ledger

Fig 8.1 — Vendor list with outstanding balances

What is the Vendor Ledger?

When Gulnar's own rooms are insufficient for a booking, extra rooms are purchased from external vendors (other hotels or suppliers). The Vendor Ledger tracks what Gulnar owes each vendor.

Vendor list	All registered room suppliers with their name, phone, and balance owed.
Balance Owed (SAR)	How much Gulnar still owes that vendor for room purchases.
Ledger button	Opens the full transaction history for that vendor — purchases and payments.
Adding a purchase	Go into the vendor's ledger and record a room purchase (dates, room type, quantity, cost per night). This increases Gulnar's available inventory for those dates.
Recording payment	Record a payment to the vendor to reduce the balance owed.

TIP: Vendor room purchases automatically add extra rooms to the Inventory for the specified dates. You will see the inventory numbers increase immediately after saving a purchase.

+ Schedule a Change

Fig 9.2 — Settings: Room Types and Scheduled Changes

WARNING: The Settings panel is accessible to ADMIN role only. Staff accounts will not see this menu.

Users

View users	See all system users, their role (ADMIN/STAFF), and enabled status.
------------	---

Add User	Create a new login account. Set username, password, and role.
Role: ADMIN	Full access — all modules including Settings.
Role: STAFF	Restricted access — cannot open Settings/Admin.

Agents

View agents	Lists all partner agents registered in the system.
Add Agent	Register a new partner agent. Required before creating bookings for them.
Edit	Update agent name, phone, or email.

Room Types, Pricing & Inventory

Room Type list	All room types with category (STANDARD/PREMIUM), total rooms, and price/night.
Add New Room Type	Create a new room category with its own inventory and pricing.
Edit	Modify price or room count. Changes apply to new bookings immediately.
Scheduled Room Type Changes	Set a future date when a room type's category or count will change. Used for seasonal allotment adjustments. The system applies the change automatically on that date.

Database Backup

Click **Download DB Backup (.sql)** to export a full SQL dump of your database. Keep this file safe — it can restore your entire system if needed. Take a backup before any major data changes.

10 Quick Reference — What Happens When You Create a Booking

Understanding the automatic chain of events helps you trust the system and spot errors early.

Action	What the System Does Automatically
Create CONFIRMED booking	• Assigns voucher number • Reduces available inventory for those dates • Creates a CHARGE in the Customer Ledger (sale price) • Creates a CHARGE in the Gulnar Ledger (Gulnar cost) • Calculates profit per booking
Cancel a booking	• Restores inventory • Reverses ledger entries (credit back) • Marks booking CANCELLED
Edit a booking	• Recalculates and re-posts ledger entries • Updates inventory for old and new dates
Record a customer payment	• Creates a PAYMENT entry in the Customer Ledger • Reduces agent's outstanding balance
Record an agent payment to Gulnar	• Creates a PAYMENT entry in the Gulnar Ledger • Reduces the 'owes Gulnar' balance
Add a vendor purchase	• Adds extra rooms to inventory for the specified dates • Creates a payable entry in the Vendor Ledger
